

stimulates skin cell renewal by increasing the rate of mitotic cell division. Topical use of the **B.E.E.**[®] wrinkle therapy products stimulate collagen synthesis.

One mechanism by which **B.E.E.**[®] wrinkle therapy products promote youthful cell production is to facilitate the stimulating effects of epidermal growth factor. It also helps assist epidermal growth factors in bringing young cells to the surface of the skin.

Our clinical trials showed that **B.E.E.**[®] wrinkle therapy cream aids in wrinkle removal and diminishes fine lines.

AgeControl[®] causes a visible lifting, tightening of the skin, while the wrinkles appeared to be less visible in just 1–2 weeks.

B.E.E.[®] herbal blend constituents are capable of tissue remodeling, decreasing scarring and even reversing the effects of aging on human skin tissue and are especially formulated for cell repair and skin renewal.

AgeControl[®]

phytomedicines make breakthrough
in anti-aging treatment

MANUFACTURER: Hamida Pharma Inc. USA

B.E.E.[®]

intensive day and night anti-wrinkle treatment
and intensive eyelid lift
with bioenhanced extracts

The AgeControl® line is a decisive step forward in the struggle against the effects of aging and time. The Hamida Pharma AgeControl® products are the result of applying the breakthrough technology of BioEnhanced Extraction® and scientific research on the skin aging process, which brings a new dimension into skin care products.

AgeControl® combines a selection of particularly active B.E.E.® herbal extracts with powerful anti-aging properties, stemming from the best that science and nature can offer. Incorporated in very high concentrations, these active ingredients work synergistically together to combat fast and effectively several mechanisms underlying in skin aging.

AgeControl® – intensive day and night anti-wrinkle treatment

Prevents, reduces and repairs wrinkles. Helps reduce the appearance of existing wrinkles by reinforcing the support fibers of the connective tissue. It promotes youthful cell production by facilitating the stimulating effects of epidermal growth factor. It also helps assist epidermal growth factors in bringing young cells to the surface of the skin.

VISIBLE RESULTS:

Smoother wrinkles more luminous and softer skin can be observed even after a single application. When used regularly, day-by-day, the skin becomes smoother, firmer and maintains better elasticity. AgeControl® restores radiance and brings freshness to your face. AgeControl® also effectively reduces skin spots and other age-related blemishes. Clinical tests demonstrate fast and visible results.

DIRECTIONS FOR USE:

Day treatment – apply a small amount of cream in the morning on cleansed, dried skin. Night treatment – apply a small amount of cream in the evening before bedtime. Gently massage AgeControl® cream into your face using a circular motion until completely absorbed. AgeControl® cream is fast absorbing, leaving your skin youthful, smooth and silky.

The AgeControl® products are available in convenient airless dispensers that protect the actives from oxidation and contamination and provide better dose control.

AgeControl® – eyelid-line intensive lift

Firms and tightens eyelid contours, smoothes lines and crow’s feet and reduces puffiness.

AgeControl® is an extraordinary concentrated serum manufactured using the innovative technology of BioEnhanced Extraction (B.E.E.®). AgeControl® quickly provides an active herbal complex into the skin and effectively reduces the appearance of eyelid-lines.

VISIBLE RESULTS:

From the first application, this very soft, firm serum visibly smoothes the contour of the eye. After a few days of daily use, the skin of the upper lid will appear tightened. Wrinkle lines and crow’s feet appear less visible and smoother and the bags under the eyes seem less noticeable. After 2–3 weeks of daily use the upper lids look “pulled back” and crow’s feet and puffiness are even less noticeable.

DIRECTIONS FOR USE:

Daily treatment: Apply eye-lift in the morning and/or evening on perfectly clean skin. Tap the serum lightly along upper and lower lids. Starting at the inside corner of the upper lid, gently smooth the serum into the skin following the line of your eyebrows, working towards the outer corner of the eye. Repeat this method on the lower lid, always working toward the outer corner. Repeat this method several times until the serum is completely absorbed.

The BioEnhanced Extraction® (B.E.E.®)

of herbal ingredients in combination with other added nutrients act on face wrinkles similar to a surgical face-lift. Our purpose is to innovatively create the best natural moisturizing, anti-wrinkle, anti-aging cream available on the market that will actually prevent and repair skin imperfections. B.E.E.® wrinkle therapy cream is the very latest in rejuvenating skin care technology. Recent scientific research has shown that a hallmark characteristic of aged skin is the slowdown in production of youthful new cells to replace the rapidly accumulating pool of damaged aged cells. Treatment with Hamida Pharma AgeControl® wrinkle therapy creams
